

Problem Statement

I wants to use the data to answer a few questions about the customers, especially about their visiting patterns, how much money they've spent and also which menu items are their favourite. Having this deeper connection with his customers will help him deliver a better and more personalised experience for his loyal customers.

Based on the insights gained from the data, the client plans to decide whether to expand the existing customer loyalty program.

Additionally, they require assistance in generating some basic datasets so that their team can easily inspect the data without the need for using SQL.

This problem statement was solved using SQL, which was used to analyze and query the database to generate insights and datasets. SQL was utilized to extract the necessary data and generate reports to provide insights into the customer behavior, sales trends, and product performance, which helped the client make data-driven decisions regarding the loyalty program. SQL was also used to create datasets that could be easily accessed and analyzed by the client's team, allowing them to understand the data without needing to have expertise in SQL.

5 key datasets for this case study:

- Sales
- Product
- Username
- Users
- Gold users_Signup

Entity Relationship Diagram

Q1. What is the total sales revenue generated by each product?

Q2. Which 3 product has the highest sales revenue?

Q3. How many users have signed up for the service and has taken the gold membership?

Q4. What is the revenue generated from gold users?

Q5. What is the total revenue generated from gold users?

Q6. Which users has been a gold user for the How much of time?

Q7. What is the most popular product among gold users?

Q8. What is the total sales revenue generated in each year?

Q9. How has the sales revenue changed over the years?

Q10. What is the average Gold-signup compare to just sign up for the users?

Q11. How many gold members users have order how many numbers of time ?

Q12. What is the total amount each customer spend on Online Food Delivery?

Q13. What is the frequency of customer visits to the online platform?

Q14. What was the first order purchase by each customer ?

Q15. What is the most purchase item on the menu and how many times was it purchased by all customers?

Q16. Which item was most popular for each customer ?

Q17. Which item was purchase first by the customer after they become a member ?

Q18. Which item was purchase before the customer become a member ?

Q19. What is the total orders and amount spent for each member before they become a member ?

Q20. Rank all the transactions for each member whenever they are a XYZ gold member for every non gold member Transaction marks as na ?
